The Kaighin Y-DNA Tree

Legend and Notes

1. According to John Cleer of MarcDNA.co.uk: "If we look at the Kaighin haplotype it is clear that it may well be a very unusual and hence a distinctive one! The following marker values are very rare indeed within Haplogroup I - DYS391 = **9**, DYS392 = **9** and DYS464a = **10** - and represent the unique haplotype signature of the Kaighins - and you should be looking to see if you can find other I1 matches that match on these 3 markers alone. These 3 markers values are some distance from the I1 haplogroup modal signature and are distinctive and meaningful!" Since this discovery, we have also discovered that the value of DYS389 = **12** is also very rare and is therefore also a distinctive marker.
2. Ken Nordtvedt's mutation rates include loci 1-67, 73-75, 86-92, 103-104 and 110. All rates derived from multiple sources provided by Duncan Robertson.
3. Only the frequencies for Kaighin modal values shown. Multiple sources used, but the primary source is the Y-STR Allele Frequencies page on Ancestry.com compiled by Leo Little. FTDNA standards used: <0.005 indicated by **0.00**.
4. * indicates all haplogroups represented in count.
5. Duncan is our link to the first MacEachan to reach the Isle of Man.
6. M253 (I1) is downstream from M170 (I). To see the complete human Y-DNA haplotree see https://www.isogg.org/tree/index.html#ytree
7. I1 STR values obtained from Ken Nordtvedt (2012)

The Y-DNA STR test used in this study is the 111 marker test from Family Tree DNA (www.ftdna.com).
A1395 can be viewed on the YFull tree at https://www.yfull.com/tree/I-A1395/
Fenner, Jack N. "Cross-cultural Estimation of the Human Generation Interval for Use in Genetics-based Population Divergence Studies," American Journal of Physical Anthropology (2005): 415-23. Print.
